EXPERIMENT / MODULE 3

PASSENGER REGISTRATION FORM SYSTEM

AIM & OBJECTIVE

To design an interactive Railway Passenger Registration web form using HTML5 form controls, CSS styling, and strict validation rules.

1. FORM CONTROLS & FIELD SPECIFICATIONS

Field Name	HTML Tag / Input Type	Validation & Constraint
First Name	<input type='text'>	Alphabet-only, Numbers Strictly Blocked
Last Name	<input type='text'>	Alphabet-only, Numbers Strictly Blocked
Date of Birth	<input type='date'>	Valid Date, Max date: Today
Gender	<select> Dropdown	Male / Female / Transgender
Mobile Number	<input type='tel'>	10-Digits Numeric Only, Letters Blocked
Email ID	<input type='email'>	RFC standard email regex match
Password	<input type='password'>	Min 6 Characters, Alpha-numeric
Confirm Password	<input type='password'>	Must match password exact characters
Terms & Policy	<input type='checkbox'>	Mandatory selection before submission

2. REGISTRATION WORKFLOW ARCHITECTURE

Step 1: User inputs personal and contact details with real-time keystroke filtering.
Step 2: If user types numbers into Name fields or letters into Mobile number, the input guard prevents character insertion and alerts the user.
Step 3: On form submission, all fields are verified for presence, validity, and password equality.
Step 4: Upon successful validation, the user profile is stored and redirected to the Passenger Login Portal (Module 2).

3. RESULT & OUTCOME

The Passenger Registration page (Module 3) was successfully implemented and validated. All required input controls and form constraints operate as expected.
